

ESSENTIAL POWER

Power loss is not an option: PowerPro Extreme® 12 starters help keep hospitals running

The COVID-19 pandemic has presented some unique challenges to hospitals around the world, and may continue to do so for the foreseeable future. An influx of patients and increasing demands for critical lifesaving and life sustaining equipment has made it more important than ever to ensure a steady flow of power where and when it's needed most.

Hospitals can never afford to lose power to their electrical, communication or data systems for any reason. In fact, the National Fire Protection Association mandates that hospitals be able to restore power in essential areas, including surgery and trauma centers, in 10 seconds or less. This means you need a reliable and fast-acting backup system at the ready at all times.

The PowerPro Extreme 12 starter from Prestolite Electric provides the capabilities you need to get your systems back up and running quickly. Already used by leading engine OEs in their generator sets, PowerPro Extreme 12 starters are engineered to meet the most extreme and demanding conditions, with features that will give you consistent starting power and efficiency.

PowerPro Extreme 12 starters
Engineered to meet extreme and demanding conditions with exclusive features designed to improve starting power and efficiency!

- 24V 12kW starting power
- Lightweight at 36 lbs. (16.5 kilos)
- -40°C to 125°C ambient operating range
- Fully-sealed noseless design to protect internal components
- Robust armature design to reduce power loss
- Soft start relay to reduce potential for ring gear damage
- Integral magnetic switch to eliminate voltage drop issues
- Insulated return

Did you know?

PowerPro Extreme 12 starters are precisely designed to conform to major OE engine manufacturer testing specifications, ensuring a simplified preventative maintenance program and a significant increase in uptime.
